 3: // NAME
 4: //    auxlib - Auxiliary miscellanea for handling system interaction.
 5: //
 6: // DESCRIPTION
 7: //    Auxlib has system access functions that can be used by other
 8: //    classes to print appropriate messages and keep track of
 9: //    the program name and exit codes.  It assumes it is being run
10: //    from a jar and gets the name of the program from the classpath.
11: //    Can not be instantiated.
12: //
13:
14: import static java.lang.System.*;
15: import static java.lang.Integer.*;
16:
